Task 6: Definition of Done (DoD)

New Features:

- **Multi-Language Support:** Implementation of full translations for Japanese, Italian, German, Portuguese, Chinese, and Korean across all products, pages, and functions.

- **Multi-Currency Support:** Integration of conversion and display capabilities for currencies from South Korea, India, Brazil, Mexico, South Africa, Russia, China, and Japan.

DoD Criteria:

1. Functionality

- Multi-Language Support: All site pages, product descriptions, and functions display accurate translations.

- Multi-Currency Support: All price displays, payment modules, and checkout processes reflect the correct local currencies.

2. Testing

- Multi-Language Support: Both automated and manual UI tests for each language have passed.

- Multi-Currency Support: Unit and integration tests verify the accuracy of currency calculations.

3. Documentation

- Multi-Language Support: User and admin guides are updated with instructions for language selection and translation maintenance.

- Multi-Currency Support: Technical documentation details API integrations, configurations, and data flow for currency conversions.

4. Security and Compliance

- Multi-Language Support: No sensitive data is exposed through language translations.

- Multi-Currency Support: All financial data and API communications use secure, encrypted channels.

5. Deployment and Maintenance

- Multi-Language Support: A deployment plan is in place with clear rollback procedures in case of translation issues.

- Multi-Currency Support: A production deployment checklist confirms successful integration of all currency features.
